DETAILED ACTION

Allowable Subject Matter

1. Regarding independent claims 1, 8 and 14, they teach a method, system and controller, of rescoring the results of automatic speech recognition. Prior art such as Reynar and Haddock teach a similar method, system and controller, but fails to teach the recited method, system and controller comprising generating a plurality of lattices for received speech utterances associated with filling in a plurality of user selected data fields in a user interface. While Reynar teaches generating a plurality of lattices for received speech utterances with filling in a plurality of data fields, Reynar does not teach filling in a plurality of user selected data fields in a user interface. Haddock teaches filling in a plurality of user selected data fields in a user interface, however, the combination does not associate the plurality of lattices with the filling of a plurality of user selected data fields in a user interface.

Dependent claims 2-7, 9-13 and 15-16 are allowed because they further limit their parent claims.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Alleva et al. (USPN 6,694,296) disclose a method and apparatus for the recognition of spelled spoken words.
